

# microprocessors and microsystems

## Index to Volume 10 Numbers 1-10, pages 1-584 (1986)

### Subject index

(P) = product news;

(I) = interface;

(A) = applications

<b>Apple II</b>			
— in audio time delay system	500		
<b>Applications</b>	33, 295, 332		
— of BBC microcomputer	33		
— of \$100 bus	120		
<b>Application-specific ICs</b>			
— manufacture (I)	50		
<b>Arithmetic processors</b>			
— for 6800 systems	442	C	
<b>Assembly language</b>			
— tutorial programs	336	— commands for increasing flexibility of Unix for software development	540
<b>Audio time delay</b>			
— 6809-based system for	500	Car navigation	296
<b>Automation</b>		— microprocessor software for (A)	
— role of MAP in industry	363	CD ROM	349
<b>Backplane buses</b>		— SCSI interface	411
— comparison of 32-bit buses	94	— standard specifications (I)	
— Fastbus	77, 94	Communications	
— Futurebus	65, 94, 125, 131	— European research project (RACE) (I)	244
— independent user's view	125	Computer vision	
— M3	101	— system based on a single-chip microcomputer	485
— Multibus I	125	Computer-aided engineering	
— Multibus II	91, 94	— teaching with the BBC microcomputer	313
— Nubus	94	Computer-aided manufacturing	
— physics of buses	61, 94	— teaching with the BBC microcomputer	313
— Q-bus	108	Concurrency	
— S100	120	— in distributed systems	475
— STD bus	115	Control applications	
— STEbus	125	— embedded systems in	491
— VAXBI (P)	284	— implementing PID algorithms on microprocessors	543
— VMEbus	86, 94, 125, 305	— microcomputer design for	216
— VMX (I)	244	— pingpong playing robot	333
— VSB	307		
— VSB (I)	244		
<b>BASIC</b>			
— programming the BBC microcomputer in	33		
<b>BBC microcomputer</b>			
— for data collection	33	— software for automatic computer exchange	491
— for teaching computer-aided engineering	313	— using M68000	148
— in handprinted text reader	377	Crossassemblers	
— interfacing to speech recognizers	371	— for the TMS32010	434
<b>Benchmarks</b>		Custom ICs	
— for dual-microcomputer system	3	— design workstation for (P)	43
<b>Bipolar logic arrays (P)</b>	284	— manufacture of (I)	50
<b>Board tester</b>		Data acquisition	
— for bus structured boards (P)	180	— in laboratory experiments	325
<b>Book reviews</b>	38, 171, 227, 282, 343, 454, 510, 563	<b>DC motor</b>	
<b>Built-in self-test</b>		— speed control system for	543
— for VLSI circuits	139	<b>Debugging</b>	
— new techniques	531	— graphics-based tool	195
<b>Board tester</b>		— in embedded control systems	491
— for bus structured boards (P)	180	— Z80	198
<b>Benchmarks</b>		<b>Delay generators</b>	
— for dual-microcomputer system	3	— microprocessor control application	25
<b>Bipolar logic arrays (P)</b>	284	<b>Design for testability</b>	
<b>Board tester</b>		— in VLSI circuits	139
— for bus structured boards (P)	180	— new methods	531
<b>Book reviews</b>	38, 171, 227, 282, 343, 454, 510, 563	<b>Digital signal processing</b>	
<b>Built-in self-test</b>		— microcomputer processing of 10 MHz acoustic signals	273
— for VLSI circuits	139	— simulation of	419
— new techniques	531	— software development	251
<b>Built-in self-test</b>		<b>Digital signal processors</b>	
— for VLSI circuits	139	— DSP56000 (P)	400
— new techniques	531	— IMS A100 (P)	461
<b>Car navigation</b>		— PDSP 16112 (P)	400
— microprocessor software for (A)	296	— TMS32010	251, 434
<b>CD ROM</b>		<b>Distributed processing</b>	
— SCSI interface	349	— software constraints on	475
— standard specifications (I)	411	<b>Dual-microcomputer systems</b>	
<b>Communications</b>		— with shared memory and I/O bus	3
— European research project (RACE) (I)	244	<b>Embedded systems</b>	
<b>Computer vision</b>		— microprocessor software for an automated computer exchange	491
— system based on a single-chip microcomputer	485	<b>Evaluation boards</b>	
<b>Computer-aided engineering</b>		— for 32000 series (P)	181
— teaching with the BBC microcomputer	313	— for F9450 (P)	181
<b>Computer-aided manufacturing</b>		— for NS32008	28
— teaching with the BBC microcomputer	313	<b>Exception handling</b>	
<b>Concurrency</b>		— in the 68000	202, 258
— in distributed systems	475		
<b>Control applications</b>			
— embedded systems in	491		
— implementing PID algorithms on microprocessors	543		
— microcomputer design for	216		
— pingpong playing robot	333		

Fifth-generation computers			
— using Futurebus	69	— 740 series (P)	234
Flag bits	169	— 8751	485
— on 8085		Microcontrollers	485
Flight control simulation	148	— HPC family (P)	346
— using the 68000		Microprocessor development	346
Floating-point coprocessors	567	— PC development system (P)	347
— 68882 (P)		— system with switched memory	392
FORTH	41	decoding	392
— CM4000 implementation (P)		Microprocessor modules	179
Gate arrays (P)	460	— Clipper (P)	179
Graphics	386	Microprocessors	278, 392
— 82720-based board design		— 6502	278
Graphics processors	348	— 6800	543
— 82786 (P)	516	— 6802	216, 442
— TMS34010 (P)		— 6809	500
IC testing	11, 202, 258	— 8085	169
— database test method	161	— 32008	28, 148
Industrial automation	363	— 68000	11, 202, 258
— role of MAP		— 68030 (P)	567
Industrial control	115	— 82720	386
— STD bus in		— 82786 (P)	348
Intel 8085	169	— Am9511A	442
— logical operations on flag bits		— ARM (P)	459
— undocumented features of	169	— NC4000 (P)	41
Intel 82720	386	— TMS320 series	419
— graphics board design with		— TMS32010	251, 434
Interfacing	278	— Transputer	211
— 6800 to Apple II		— Z80	195, 427
— analogue interface for laboratory	325	— Z80 000 (P)	285
— peripheral interface adaptors	222	Military applications	51
— ‘transparent’ interfacing of		— screening for 32000 (I)	51
speech recognizers	371	Multimicroprocessors	156
Interrupts	91	— message passing primitives in	156
— bus sharing		Multitasking	491
— in 68000	202, 258	— in embedded control systems	
I/O communication	3	NC4000 FORTH microprocessor (P)	41
— a shared I/O bus		Network controllers	17
Laboratory instrumentation	216	Network switching	491
— microcomputer design		— in an automatic computer exchange	
Local area networks	17	Networks	491
— topologies and protocols		— Cambridge Ring	17
Machine reading	377	— CSMA/CD (Ethernet)	17
— handprinted text reader		— MAP	363
Manufacturing Automation Protocol (MAP)		— token bus	17
— European CNMA project (I)	299	— token ring	17
— role in industrial networks	363	NS32008	28
— token bus controller (P)	233	— evaluation board for	
— UK government awareness schemes (I)	410	Open Systems Interconnect	363
MC6800	392	— role of MAP	363
— development system		Optical sensors	485
MC68800	543	— based on dynamic RAM	
— in DC motor control system		Parallel computing	69
MC6802	442	— Futurebus-based architecture	69
— software controller for		Personal computers	325
MC6809	500	— for laboratory control experiments	325
— in audio time delay system		PID algorithm	543
MC68000	202, 258	— microprocessor implementation for DC motor control	543
— exception handling in	148	Program monitoring	198
— for process control		— graphics-based debugger	
— implementation of Viterbi decoding algorithm	11	RACE communications project (I)	244
— interrupts in	202, 252	RAMs	568
MC68030 (P)	567	— in mixed bipolar and CMOS	568
MC6882 (P)	567	RISC	
Message implementations	475	— Acorn RISC machine (P)	459
— in distributed systems		— in IBM workstation (I)	188
Message passing	156	— workstation implementations (I)	458
— primitives		Robotics	
— using Multibus II	91	— teaching with the BBC microcomputer	313
Microcomputers	500		
— Apple II			
Microcomputers (single chip)			

## Author index

(A) = applications;  
 (DN) = design note;  
 (PP) = product profile;  
 (RN) = research note;  
 (T) = teach-in;  
 (U) = update

- Alexander, J Evolution and use of the VME subsystem bus — VSB 307  
 Afford, G D Teaching computer-aided engineering on the BBC microcomputer 313  
 Alshabani, S Microprocessor-based delay generators (DN) 25  
 Al-Kindi, M see Dunlop, J 251  
 Anvekar, D K see Narasimhan, V L 3  
 Batchelor, D Advances in STD system capability 115  
 Bergman, G D Development equipment with switched memory decoding (DN) 392  
 Biswas, J C see Chakraborty, P K 169  
 Borrelli, P Objective comparison of 32-bit buses (U) 94  
 Bradshaw, A Minimal M68000 system controllers for fast acting multi-input multi-output processes 148  
 Campbell, B see Robertson, P J 33  
 Campbell, D R Crossassembler for the TMS 32010 digital signal processor 434  
 Canning, C see Campbell, D R 434  
 Chakraborty, P K Logical operations on flag bits X5 and CY, definition of D3 and an undocumented feature of instruction DADRP in the 8085 (RN) 169  
 Chance, J Simulation experiences in the development of software for digital signal processors 419  
 Chang, I S see Chen, W H 273  
 Chen, W H Microcomputer processing of 10 MHz acoustic signals 273  
 Chmielowski, M Data acquisition and control system for laboratory experiments 325  
 Cifello, F Embedded microprocessor software: case study of an automatic computer exchange 491  
 Clements, A Exception handling in the 68000, Part 1 (T) 202  
 Clements, A Exception handling in the 68000, Part 2 (T) 258  
 Corsini, P Software development tool for target systems and EPROM programmers within a Unix environment 540  
 Dabbagh, H I 'Transparent' interfacing of speech recognizers to microcomputers 371  
 Damper, R I see Dabbagh, H I 371  
 Davidson, J 32008-based single-board microcomputer (DN) 28  
 Davies, A C Graphbug — a microprocessor software debugging tool 195  
 Dawes, S Why the Q-bus lives on 108  
 Del Corso, D Experiences in designing the M3 backplane bus standard 101  
 Dimond, K R see Said, S M 11  
 Dunlop, J Hardware system for realtime signal processing software development 251

- Edwards, R Futurebus — the independent standard for 32-bit systems 65  
 Fujiwara, H Design for testability and built-in self-test for VLSI circuits 139  
 Gascoigne, J D see Weston, R H 363  
 George, G W S100 in commercial applications 120  
 Goussous, A S see Davies, A C 195  
 Gustavson, D Introduction to the Fastbus 77  
 Guy, D P see Dabbagh, H I 371  
 Haley, A Interactive development environment for single-board computers 268  
 Heath, S Building up a system architecture using VMEbus 86  
 Jerew, D H see Wahab, A A 161  
 Kim, J see Martin, J 216  
 Knight, J Pingpong-playing robot controlled by a microcomputer (A) 332  
 Konnanan, P see Bradshaw, A 148  
 Linge, N Emerging local area network technologies (T) 17  
 Lowery, D see Knight, J 332  
 Malyan, R Handprinted text reader that learns by experience 377  
 Mansour, Z see Alshabani, S 25  
 Martin, J Microcomputer for the dynamics laboratory 216  
 Miller, K see Campbell, D R 434  
 Muchmore, S Multibus II message passing 91  
 Nagarajan, R see Wahab, A A 161  
 Narasimhan, V L Design and evaluation of a dual-microcomputer shared memory system with a shared I/O bus 3  
 Ng, K W Message-passing primitives for multimicroprocessor systems 156  
 Oxford, H see Haley, A 268  
 Omotayo, O R Talking teletext receiver for the blind 553  
 Peyton-Jones, S Using Futurebus in a fifth-generation computer 69  
 Prabhakar Rao, P New design for an 82720-based colour graphics generator (DN) 386  
 Prete, C A see Corsini, P 540  
 Ramachandra, J K see Narasimhan, V K 3  
 Ranga Rao, K V Software controller for an arithmetic processor 442  
 Refai, M K Microprocessor-based digital controller for DC motor speed control 543  
 Robertson, P J Example of the use of the BBC microcomputer for data collection (A) 33  
 Rowe, M An independent user's view of backplane bus standards 125  
 Russell, G Design for testability — a review of advanced methods 531  
 Russell, R A Vision system based on a single-chip microcomputer 531  
 Said, S M Realtime implementation of the Viterbi decoding algorithm on a high-performance microprocessor 485  
 Sayers, I L see Russell, G 11  
 Sia, L C see Tan, B T G 531  
 Srinivasan, S see Prabhakar Rao, P 278  
 Steele, P see Tomek, I 386  
 Stephens, C see Haley, A 336  
 Subramanyam, O see Ranga Rao, K V 268  
 Sumpter, C M see Weston, R H 442  
 Suntharkar, S see Malyan, R 363  
 Tan, B T G 12-bit digital audio time delay using the 6809 377  
 Tan, B T G 6800 coprocessor for a 6502 bus (DN) 500

- Taylor, M Flexible interface based on the peripheral interface structure (DN) 278  
 Taylor, R Transputer communication link 222  
 Tay, L P see Tan, B T G 500  
 Tomek, I Assembler-monitor package to teach assembly language (PP) 336  
 Tyler, J Speech recognition system using Walsh analysis and dynamic programming 427  
 Wahab, A A Simple IC tester using a database technique 161  
 Weston, R H Industrial computer networks and the role of MAP, Part 1 363  
 Whiddett, R Distributed programs: an overview of implementations 475  
 Wilson, R The physics of driving backplane buses 61  
 Woodhead, M A see Bradshaw, A 148

## Title index

(A) = applications;  
 (DN) = design note;  
 (PP) = product profile;  
 (RN) = research note;  
 (T) = teach-in;  
 (U) = update

- Advances in STD system capability 115  
 An independent user's view of backplane bus standards 125  
 Assembler-monitor package to teach assembly language (PP) 336  
 Building up a system architecture using VMEbus 86  
 Crossassembler for the TMS32010 digital signal processor 434  
 Data acquisition and control system for laboratory experiments 325  
 Design for evaluation of a dual-microcomputer shared memory system with a shared I/O bus 3  
 Design for testability and built-in self-test for VLSI circuits 139  
 Design for testability — a review of advanced methods 531  
 Development equipment with switched memory decoding (DN) 392  
 Distributed programs: an overview of implementations 475  
 Embedded microprocessor software: case study of an automatic computer exchange 491  
 Emerging local area network technologies (T) 17  
 Evolution and use of the VME subsystem bus — VSB 307  
 Example of the use of the BBC microcomputer for data collection (A) 33  
 Exception handling in the 68000, Part 1 (T) 202  
 Exception handling in the 68000, Part 2 (T) 258  
 Experiences in designing the M3 backplane bus standard 101  
 Flexible interface based on the peripheral interface structure (DN) 222  
 Futurebus — the independent standard for 32-bit systems 65  
 Graphbug — a microprocessor software debugging tool 195

Handprinted text reader that learns by experience	377	controller for DC motor speed control	543	Software development tool for target systems and EPROM programmers within a Unix environment	540
Hardware system for realtime signal processing software development	251	Minimal M68000 system controllers for fast acting multi-input multi-output processes	148	Speech recognition using Walsh analysis and dynamic programming	427
Industrial computer networks and the role of MAP, Part 1	363	Multibus II message passing	91	Talking teletext receiver for the blind	553
Interactive development environment for single-board computers	268	New design for an 82720-based colour graphics generator (DN)	386	Teaching computer-aided engineering on the BBC microcomputer	313
Introduction to the Fastbus	77	Objective comparison of 32-bit buses (U)	94	The physics of driving backplane buses	61
Logical operations on flag bits X5 and CY, definition of D3 and an undocumented feature of instruction DADrp in the 8085 (RN)	169	Pingpong-playing robot controlled by a microcomputer (A)	332	'Transparent' interfacing of speech recognizers to microcomputers	371
Message-passing primitives for multimicroprocessor systems	156	Realtime implementation of the Viterbi decoding algorithm on a high-performance microprocessor S100 in commercial applications	11	Transputer communication link	211
Microcomputer for the dynamic laboratory	216	Simple IC tester using a database technique	120	Using Futurebus in a fifth-generation computer	69
Microcomputer processing of 10 MHz acoustic signals	273	Simulation experiences in the development of software for digital signal processors	161	Vision system based on a single-chip microcomputer	485
Microprocessor-based delay generators (DN)	25	Software controller for an arithmetic processor	419	Why the Q-bus lives on 12-bit audio time delay using the 6809 (DN)	108
Microprocessor-based digital			442	6800 coprocessor for a 6502 bus (DN) 32008-based single-board microcomputer (DN)	500
					28
